The Chinese company is better known for its smartphones but also manufactures a host of other products, from electric rice cookers to air purifiers. Its laptops, however, have been the real head-turners over the past 18 months. Following the Xiaomi Mi Notebook Air 13.3 (2017) and the Xiaomi Air 12, meet the new kid on Xiaomi's block, the Mi Notebook Pro. Where to buy? Online Chinese retailer, Gearbest (opens in new tab), sent us the sample and sells the Xiaomi Mi Notebook Pro for just over £868 (\$1,140) at the time of writing. (ed: Use the coupon MTPRO to bring down the price to only £687.71. The coupon expires midnight on 31/12/2017) Note that, while this price includes delivery, it is exclusive of any taxes that may be levied by HMRC or the courier companies on behalf of the vendor. Want to buy tech from online Chinese retailers? Read this first. Ruthless postmodernism is how one might define the design of the Mi Notebook Pro - the chaps in charge at Xiaomi opted for a darker color scheme compared to its smaller sibling, "Deep gray", as they call it, is an attractive alternative to the silver brushed metal designs that most thin-and-slim laptops sport. There's no significant tapered profile here. Instead, you have an almost perfectly rectangular slab of metal alloy - with some curves here and there - that weighs just under 2kg, with its dimensions (360 x 244 x 15mm) making it hardly portable; that's the price to pay for a larger display. In comparison, the Mi Notebook Air, which sports roughly the same configuration, is more than a third lighter and costs less. The biggest differences are the size and fewer ports. With the Notebook Pro, you get one HDMI port, two USB Type-A connectors and an audio jack on the left side, with two USB Type-C ports and an SD card reader located on the right. Note that one of the Type-C connectors is used as a power port. The power button is located at the top right-hand side of the device, not our favorite location. As is usually the case with Xiaomi laptops, there's no logo on the top of the device. Flipping it over exposes a large flat surface with a Mi logo, a removable sticker, five rubber feet, a pair of speaker grills and a multitude of air vents. Open the laptop and you'll see the 15.6-inch display, which is covered by a Corning Gorilla Glass sheet, an odd choice given that the display is not touch-capable. The long, single hinge, is reminiscent of Apple's notebooks, and so is the layout of the keyboard. Remember, this is a 15.6-inch model so it has enough space for a numeric keypad. You won't find one here, though, and instead Xiaomi engineers opted for full-size keys with a low activation force, short 1.5mm travel (to give better sense of confirmation), a 0.3mm thick hyperboloid keycap (rather than a flat one) and a noticeable absence of any double-function keys (at least on the main bank of keys). And yes, this is a backlit keyboard and unlike some competitors, it only offers an on-off option. The touchpad is large and houses a fingerprint reader. It doesn't have physical right and left buttons which might put off some folks. Spec Sheet Here is the Xiaomi Mi Notebook Pro configuration sent to TechRadar Pro for review: CPU: Core i5-8250U quad-core 3.4GHz Graphics: Nvidia GeForce MX150; Intel UHD Graphics 620 RAM: 8GB DDR4 Screen: 15.6-inch 1920 x 1080 resolution display Storage: 256GB Samsung PM961 SSD Ports: 2 x USB Type-A, 2 x USB Type-C, 1 x HDMI, audio jack, microSD Connectivity: 802.11ac Wi-Fi, Bluetooth 4.2 Camera: 1MP front webcam Weight: 1.99kg Size: 360 x 244 x 15mm (W x D x H) Battery: 61Whr Specifications The Xiaomi Mi Notebook Pro is one of the very few laptops to feature Dolby's Atmos sound technology, which is used in conjunction with Harman Kardon Infinity speakers, there's a pair of the latter on-board (2.5W models). It is also one of the first to offer an 8th-generation Intel Core CPU. Our review sample came with the Core i5-8250U, which is far superior to previous Core i5 processors for one good reason: it is the first time that Intel has opted for a quad-core model for that range, and one that supports multi-threading. So it has four cores, eight threads, a base frequency of 1.6GHz and a Turbo frequency of 3.4GHz. Add in 6MB cache, support for DDR4-2400 and a new graphics subsystem (Intel UHD Graphics 620) and you have a compelling processor that should easily surpass even a Core i7-7600U CPU in multi-threaded tasks. The Nvidia GeForce MX150 discrete GPU which is equipped with 2GB GDDR5 memory is based on the Pascal architecture and should deliver up to around a third extra performance compared to the GeForce 940MX. The MX150 also supports Optimus technology which allows applications to switch seamlessly between integrated (UHD Graphics 620) and dedicated graphics to save battery life when the latter isn't needed. Also check out our review of the Xiaomi Mi Laptop Air 13.3 (2018) TODAY'S BEST DEALS No new notifications You'll get updated when important things are happening, and when you engage with our community. If you aren't quite ready to get a 5G phone and want something more affordable than a Samsung Galaxy Note 10 Plus or Huawei P30 Pro to tide you over until 5G coverage improves, then the Xiaomi Mi 9T Pro could be it. Xiaomi's 2019 handset delivers similar specs to a top-tier phone, despite costing what you would expect to pay for a mid-ranger. There's a follow-up in the form of the Mi 10T Pro, but it's a pricier phone. With a 6.39-inch Full HD+ Super AMOLED display, it's similar in size, spec, and screen appeal to pricier phones like the Oppo Reno 10x Zoom, and thanks to a Snapdragon 855 chipset under the hood, it's also powerful. Costing just £399 (around \$480/AU\$720) though, the Mi 9T Pro is nothing short of a steal when you look at its specs. But does it fare as well in the real world? It's possible we could see the Xiaomi Mi 9T Pro get a price cut for Black Friday or Cyber Monday, but it's not all that likely - Xiaomi has plenty of newer phones it's more likely to reduce instead. During Amazon Prime Day only the company's 2020 smartphones were reduced, nothing older like the 9T Pro. So if you're interested in buying the Mi 9T Pro, we'd recommend just going for it. Available now in the UK and throughout Europe Not available in the US! 128GB model costs £399 The Xiaomi Mi 9T Pro is available in two flavors, with either 64GB or 128GB of storage, and can be bought across Europe. Available for £399 (around \$480/AU\$720), only the 128GB version is available in the UK, and it can be had in either black or blue. While there's been no word on a US release, a variation of the phone, the Redmi K20 Pro, is available in other regions. Additionally, Xiaomi has launched a number of devices in Australia, so while no release has been confirmed at the time of writing, Xiaomi may well add the Mi 9T Pro to its Australian line-up. (Image credit: TechRadar) Design and screen Well-built and solid 6.39-inch Super AMOLED screen Pop-up selfie camera The Xiaomi Mi 9T Pro is a great looking phone. From the front, it's all screen thanks to the fact the pop-up selfie-camera is hidden from sight. Its curved body feels slick, even though it isn't a thin phone as such at 8.8mm. The buffed aluminum frame melds smoothly into the phone's front and rear glass panels, and a couple of red accents pop nicely, one on the power button and the other on the rear camera surround. (Image credit: TechRadar) The phone's back panel also features a Kevlar-like striated pattern under the glass, which looks premium, and while it does hold onto fingerprints, it isn't as bad as the worst offenders - Samsung's Galaxy S10 series. In the box, you get a case to protect the back, and the front is Gorilla Glass 5, though unlike some of the competition, the Xiaomi Mi 9T Pro doesn't include a pre-fitted screen protector. A design highlight has got to be that headphone jack; we didn't expect to see it on a phone with top-tier specs, and it's a welcome break from tradition. There's also a USB-C port and a mono speaker at the bottom of the phone, and volume and power buttons on the right side. (Image credit: TechRadar) While there is a very slight camera bump, the Mi 9T Pro's camera surround is much less protruding and sharp than that of the OnePlus 7 or Honor 20, for example - two direct competitors. As for the display, it looks glorious: 6.39 inches and a 1080 x 2340 resolution combines with Super AMOLED tech and over 400 pixels-per-inch to deliver a premium experience at a very fair price. (Image credit: TechRadar) The fact there's no notch in sight is a boon for the Mi 9T Pro; it makes it feel like a real flagship, showing up much pricier options like the iPhone XR. Viewing angles and brightness are strong and max brightness suffices for comfortable outdoor use. While we're not saying the Xiaomi Mi 9T Pro can stack up to the likes of the Samsung Galaxy S10 Plus or Galaxy Note 10 Plus from a screen quality point of view, it's still best-in-class for the price. TODAY'S BEST DEALS Xiaomi Mi 10 review (Image credit: Apoorva Bhardwaj / Android Central) Xiaomi is now rolling out the stable Android 11 update to the Redmi Note 9 Pro and Mi 10 phones in India. The European variants of the Mi 10 and Mi 10 Pro started receiving the Android 11 update last week. A few more Mi and Redmi devices are expected to be updated to Android 11 soon. Xiaomi has started rolling out the Android 11-based MIUI 12 update for the Redmi Note 9 Pro and Mi 10 phones in India. While Xiaomi had released a "stable beta" build for the Redmi Note 9 Pro last month, it was only rolled out to a small number of users. The Android 11-based MIUI 12 update brings a number of new features to two of Xiaomi's best Android phones, including a refreshed UI with new animations, improved privacy, a new Control Center, smart device controls, one-time permissions for apps, wireless Android Auto support, Chat bubbles, and more. Xiaomi says a few more Redmi and Mi phones are going to receive the stable Android 11 update "soon." If you own a Xiaomi Mi 10 or Redmi Note 9 Pro, you can check for the Android 11 update manually by heading over to Settings > About Phone > MIUI version > Check for Updates. Since Xiaomi is rolling out the update in stages, it could take at least a few days for the first stable Android 11-based MIUI 12 build to become widely available. Redmi Note 9 Pro/Redmi's Note 9 Pro is one of its most impressive budget phones yet. The phone offers a modern design, excellent battery life, Qualcomm's Snapdragon 720G chipset, and decent cameras.
